

What is the purpose of a breakpoint?

It stops the code during runtime, and shows the current values at the stop, very handy indeed

---

Does the line of code on a breakpoint run when you start debugging?

Only if you ask it to.

---

How do we debug the next line of code?

Ask the bugger to move to the next line.

---

What does the step into command do?

Lets you look at the line you have stopped on

---

What is the difference between evaluate expression and evaluate code fragment?

Expression runs a single line of code, with fragment you can run multiple lines, and add your own to play around with values, very cool indeed.

---

What is the main step you should undertake before recording a youtube video?

Make sure your laptop is sufficiently charged
